

Prostate cancer and Active surveillance in 2021

Uro pathology Course

Thursday 25
November
16:45 - 17:45

Location

MC2

Chairs

M. Colecchia, Milan (IT)

A. Lopez-Beltran, Lisbon (PT)

A. Cimadamore, Ancona (IT)

Learning objectives

The joint histological evaluation of specimens of prostate cancer by the clinician and uro pathologist can produce much more clinical and prognostic information than that contained in the final histopathology report. Both the clinician and uro pathologist can benefit from such an approach. The former will more clearly understand and explain the preoperative features of the cancer, the intraoperative findings, and postoperative follow-up of the patient. The experience acquired would help improve him/her diagnostic and prognostication capabilities and surgical skill. The uro pathologist will learn the great clinical significance of his/her daily routine. The course will be based on the projection and discussion of virtual slides.
