Morphologic and molecular classification of bladder cancer

Uropathology Course on “Joint histological evaluation of the specimens by the uropathologist and the clinician: Together we can do it better.

Chairs and Presenters
Rodolfo Montironi, Ancona (IT)
Antonio Lopez Beltran, Lisbon (PT)
Dilek Ertoy, Istanbul (TR)

Aims

The joint histological evaluation of specimens of bladder and prostate cancer by the clinician and uropathologist can produce much more clinical and prognostic information than that contained in the final histopathology report. Both the clinician and uropathologist can benefit from such an approach. The former will more clearly understand and explain the preoperative features of the cancer, the intraoperative findings, and postoperative follow-up of the patient. The experience acquired would help improve him/her diagnostic and prognostication capabilities and surgical skill. The uropathologist will learn the great clinical significance of his/her daily routine. The course will be based on the projection and discussion of virtual slides.
